ZONING BOARD OF APPEALS STAFF REPORT

FOR: City of Novi Zoning Board of Appeals

ZONING BOARD APPEALS DATE: November 10, 2020

REGARDING: 22652 Montebello Court, Parcel # 50-22-27-453-021 (PZ20-0041)

BY: Larry Butler, Deputy Director Community Development

I. GENERAL INFORMATION:

Applicant

Compo Builders Inc

Variance Type

Dimensional Variance

Property Characteristics

Zoning District:	Single Family Residential
Location:	West of Novi Road and North of Nine Mile Road
Parcel #:	50-22-27-453-021

Request

The applicant is requesting variance from the Novi Zoning Ordinance Section 4.19.1.E.i for a proposed 1,002 square foot garage (850 square feet permitted by code, variance of 152 square feet). This variance would accommodate the building the garage for a proposed new residential home. This property is zoned Single Family Residential (R-3).

II. STAFF COMMENTS:

III. RECOMMENDATION:

The Zoning Board of Appeals may take one of the following actions:

1. I move that we **grant** the variance in Case No. **PZ20-0041**, sought by _____, for _____ because Petitioner has shown practical difficulty requiring _____.
- (a) Without the variance Petitioner will be unreasonably prevented or limited with respect to use of the property because _____.
- (b) The property is unique because _____.
- (c) Petitioner did not create the condition because _____.

_____.

(d) The relief granted will not unreasonably interfere with adjacent or surrounding properties because_____.

_____.

(e) The relief if consistent with the spirit and intent of the ordinance because

_____.

_____.

(f) The variance granted is subject to:

1. _____.

2. _____.

3. _____.

4. _____.

2. I move that we **deny** the variance in Case No. **PZ20-0041**, sought by _____, for _____ because Petitioner has not shown practical difficulty requiring _____.

(a) The circumstances and features of the property including _____ are not unique because they exist generally throughout the City.

(b) The circumstances and features of the property relating to the variance request are self-created because _____.

(c) The failure to grant relief will result in mere inconvenience or inability to attain higher economic or financial return based on Petitioners statements that _____.

(d) The variance would result in interference with the adjacent and surrounding properties by _____.

(e) Granting the variance would be inconsistent with the spirit and intent of the ordinance to _____.

Should you have any further questions with regards to the matter please feel free to contact me at (248) 347-0417.

ZONING BOARD OF APPEALS APPLICATION

V. VARIANCE

A. VARIANCE (S) REQUESTED

DIMENSIONAL USE SIGN

There is a five-(5) hold period before work/action can be taken on variance approvals.

B. SIGN CASES (ONLY)

Your signature on this application indicates that you agree to install a **Mock-Up Sign ten-(10) days** before the schedule ZBA meeting. Failure to install a mock-up sign may result in your case not being heard by the Board, postponed to the next schedule ZBA meeting, or cancelled. A mock-up sign is **NOT** to be actual sign. Upon approval, the mock-up sign must be removed within five-(5) days of the meeting. If the case is denied, the applicant is responsible for all costs involved in the removal of the mock-up or actual sign (if erected under violation) within five-(5) days of the meeting.

C. ORDINANCE

City of Novi Ordinance, Section 3107 – Miscellaneous

No order of the Board permitting the erection of a building shall be valid for a period longer than one-(1) year, unless a building permit for such erection or alteration is obtained within such period and such erection or alteration is started and proceeds to completion in accordance with the terms of such permit.

No order of the Board permitting a use of a building or premises shall be valid for a period longer than one-hundred and eighty-(180) days unless such use is establish within such a period; provided, however, where such use permitted is dependent upon the erection or alteration or a building such order shall continue in force and effect if a building permit for such erection or alteration is obtained within one-(1) year and such erection or alteration is started and proceeds to completion in accordance with the terms of such permit.

**REVIEW STANDARDS
DIMENSIONAL VARIANCE**

The Zoning Board of Appeals (ZBA) will review the application package and determine if the proposed Dimensional Variance meets the required standards for approval. In the space below, and on additional paper if necessary, explain how the proposed project meets each of the following standards. (Increased costs associated with complying with the Zoning Ordinance will not be considered a basis for granting a Dimensional Variance.)

Standard #1. Circumstances or Physical Conditions.

Explain the circumstances or physical conditions that apply to the property that do not apply generally to other properties in the same zoning district or in the general vicinity. Circumstances or physical conditions may include:

- a. **Shape of Lot.** Exceptional narrowness, shallowness or shape of a specific property in existence on the effective date of the Zoning Ordinance or amendment.
 Not Applicable Applicable If applicable, describe below:

and/or

- b. **Environmental Conditions.** Exceptional topographic or environmental conditions or other extraordinary situations on the land, building or structure.
 Not Applicable Applicable If applicable, describe below:

and/or

- c. **Abutting Property.** The use or development of the property immediately adjacent to the subject property would prohibit the literal enforcement of the requirements of the Zoning Ordinance or would involve significant practical difficulties.
 Not Applicable Applicable If applicable, describe below:

Standard #2. Not Self-Created.

Describe the immediate practical difficulty causing the need for the Dimensional Variance, that the need for the requested variance is not the result of actions of the property owner or previous property owners (i.e., is not self-created).

Standard #3. Strict Compliance.

Explain how the Dimensional Variance in strict compliance with regulations governing area, setback, frontage, height, bulk, density or other dimensional requirements will unreasonably prevent the property owner from using the property for a permitted purpose, or will render conformity with those regulations unnecessarily burdensome.

Standard #4. Minimum Variance Necessary.

Explain how the Dimensional Variance requested is the minimum variance necessary to do substantial justice to the applicant as well as to other property owners in the district.

Standard #5. Adverse Impact on Surrounding Area.

Explain how the Dimensional Variance will not cause an adverse impact on surrounding property, property values, or the use and enjoyment of property in the neighborhood or zoning district.

GENERAL NOTES

WOOD TRUSS SPECIFICATIONS

- Designs shall conform with the latest versions of (NDS), 'National Design Specification for Wood Construction' by the American Forest & Paper Association, and Design Standard for Metal Plate Connected Wood Truss Construction by the American Institute of Steel Construction (AISC) and the local code jurisdiction.
- Trusses shall be spaced as indicated on the plans unless the designer determines that different spacing is required to meet deflection requirements.
- Maximum deflection of floor trusses shall be limited to $1/360$ for total load and $1/480$ for live load. Maximum deflection of roof trusses shall be limited to $1/240$ for total load and $1/360$ for live load u.s.c.
- Adequate carter shall be built into floor and parallel chord roof trusses to compensate for normal dead load deflection.
- Design loads:

FLOOR JOIST LOADING CRITERIA

FIRST FLOOR LOADING:
LIVE LOAD 40 P.S.F.
DEAD LOAD 10 P.S.F.
TOTAL LOAD 50 P.S.F.
LIVE LOAD DEFLECTION $1/480$
TOTAL LOAD DEFLECTION $1/240$

SECOND FLOOR LOADING:
LIVE LOAD 40 P.S.F.
DEAD LOAD 10 P.S.F.
TOTAL LOAD 50 P.S.F.

LIVE LOAD 30 P.S.F.
DEAD LOAD 50 P.S.F.
TOTAL LOAD 80 P.S.F.
LIVE LOAD DEFLECTION $1/360$
TOTAL LOAD DEFLECTION $1/240$

- A 15% increase on allowable stresses for short term loading is allowed. Drift loading shall be accounted for per the current 'Michigan Residential Code' requirements.
- Add additional attic storage live loads per the current 'Michigan Residential Code' requirements.
- Tile, marble, or other special features shall be designed using the appropriate dead loads and deflection limitations. Partition loads shall also be considered where appropriate.
- All conventional framed floor decks shall be 2 x 10 #2 or 2 x 12 #2 Douglas Fir or better.

HANDLING AND ERECTION SPECIFICATIONS

- Trusses are to be handled with particular care during fabrication, bundling, loading, delivery, unloading and installation in order to avoid damage and weakening of the trusses.
- Temporary and permanent bracing for holding the trusses in a straight, and plumb position is always required and shall be designed and installed by the erecting contractor. Temporary bracing during installation, includes cross bracing between the trusses to prevent toppling or "doming" of the trusses.
- Permanent bracing shall be installed in accordance with the latest of the 'National Design Standard' as published by the American Forest & Paper Association and H.I.B.-31 and D.S.B.-85 as published by the truss plate institute. Permanent bracing consists of lateral and diagonal bracing not to exceed spacing requirements of the truss fabricator. Top chords of trusses must be continuously braced by roof sheathing unless otherwise noted on the truss shop drawings. Bottom chords must be braced at intervals not to exceed 10' o.c. or as noted on the truss fabricators drawings.
- Construction loads greater than the design loads of the trusses shall not be applied to the trusses at any time.
- No loads shall be applied to the truss until all fastening and required bracing is installed.
- The supervisor of the truss erecting shall be under the direct control of personnel experienced in the installation and proper bracing of wood trusses.
- Field modification or cutting of pre-engineered roof trusses is strictly prohibited without expressed prior written consent and details from a licensed professional structural engineer experienced in wood truss design and modifications.

SOIL REQUIREMENTS & EARTH WORK AND CONCRETE

- All top soil, organic and vegetative material should be removed prior to construction. Any required fill shall be clean, granular material compacted to at least 95% of maximum dry density, as determined by ASTM D-1557.
- Foundations bearing on existing soils have been designed for a minimum allowable soil bearing capacity of 3000 psf, u.s.c.
- Notify the engineer/architect if the allowable soil bearing capacity is less than 3000 psf so that the foundations can be redesigned for the new allowable bearing capacity.

R401.1 Backfill placement.
Backfill shall not be placed against the wall until the wall has sufficient strength and has been anchored to the floor above or has been sufficiently braced to prevent damage by the backfill.

R606.2.1 Fill.
Fill material shall be free of vegetation and foreign material. The fill shall be compacted to assure uniform support of the slab and, except where approved, the fill depths shall not exceed 24 inches for clean sand or gravel and 8 inches for earth.

R606.2.3 Vapor retarder.
A 6 mil polyethylene or approved vapor retarder with joints lapped not less than 6 inches shall be placed between the concrete floor slab and the base course or the prepared subgrade where no base course exists.

- Concrete work shall conform to the requirements of ACI 301-36, 'Specifications for Structural Concrete for Buildings', except as modified as supplemental requirements.
- Concrete shall have a minimum of 3000 psi, 28 day compressive strength, unless noted otherwise. (4 sacks of a water/cement ratio not to exceed 6 gallons per sack). Exterior concrete slabs shall have a minimum of 4000 psi, 28 day compressive strength, 4.4% air entrainment.
- The use of additives such as fly ash or calcium chloride is not allowed without prior review from the architect.

R405.1 Concrete or masonry foundations.
Drains shall be provided around all concrete or masonry foundations that retain earth and enclose habitable or vehicle spaces located below grade. Drainage tiles, gravel or crushed stone drains, perforated pipe or other approved systems or materials shall be installed at or below the area to be protected and shall discharge by gravity or mechanical means into an approved drainage system. Gravel or crushed stone drains shall extend at least 1 foot beyond the outside edge of the footing and 6 inches above the top of the footing and be covered with an approved filter membrane material. The top of open joints of drain tiles shall be protected with strips of building paper, and the drainage tiles or perforated pipe shall be placed on a minimum of 2 inches of washed gravel or crushed rock at least one sieve size larger than the tile joint opening or perforation and covered with not less than 6 inches of the same material.

Exception:
A drainage system is not required when the foundation is installed on well-drained ground or sand-gravel mixture soils according to the Unified Soil Classification System, Group I soils, as detailed in Table R405.1.

STRUCTURAL STEEL SPECIFICATIONS

- Structural steel shapes, plates, bars, etc. are to be ASTM A-36 (unless noted other wise) designed and constructed per the 1989 AISC 'Specifications For The Design, Fabrication, and Erection Of Steel For Buildings', and the latest edition of the AISC 'Manual Of Steel Construction'.
- Steel columns shall be ASTM A-500, Fy36 K81. Structural tubing shall be ASTM A500, grade B, Fy46 K81.
- Welds shall conform with the latest AWS D11.1 'Specifications For Welding In Building Construction', and shall utilize E70XX electrodes unless noted otherwise.
- Bolted connections shall utilize ASTM A-325 bolts tightened to a ' snug fit' condition (unless noted otherwise).

REINFORCING STEEL SPECIFICATIONS

- Reinforcing bars, dechels and ties shall conform to ASTM-615 grade 60 requirements and shall be free of rust, dirt, and mud.
- Welded wire fabric shall conform to ASTM A-185 and be positioned at the mid height of slabs U.N.O.
- Reinforcing shall be placed and securely tied in place sufficiently ahead of placing of concrete to allow inspection and correction, if necessary without delaying the concrete placement.
- Extend reinforcing bars a minimum of 36" around corners and lap bars at splices a minimum of 24" U.N.O.
- Welding of reinforcing steel is not allowed.

STAIRWAYS AND HANDRAILS

R311.1.1 Width.
Stairways shall not be less than 36 inches (914 mm) in clear width at all points above the permitted handrail height and below the required headroom height. Handrails shall not project more than 4.5 inches (114 mm) on either side of the stairway and the minimum clear width of the stairway at and below the handrail height, including treads and landings, shall not be less than 3'-7" (107 mm) where a handrail is installed on one side and 27 inches (686 mm) where handrails are provided on both sides.

R311.1.8 Handrails.
Handrails shall be provided on at least one side of each continuous run of treads or flights with four or more risers.

R311.8.1 Height.
Handrail height, measured vertically from the sloped plane adjoining the tread nosing, or finish surface of ramp slope, shall be not less than 34 inches (864 mm) and not more than 38 inches (965 mm).

- The use of a volute, turnout or starting easing shall be allowed over the lowest tread.
- When handrail fittings or bendings are used to provide continuous transition between flights, the transition from handrail to guardrail, or used at the start of a flight, the handrail height at the fittings or bendings shall be permitted to exceed the maximum height.

SMOKE ALARMS

- R314.3 Smoke Alarms**
Smoke alarms shall be installed in the following locations:
- In each sleeping room.
 - Outside each separate sleeping area in the immediate vicinity of the bedrooms.
 - On each additional story of the dwelling, including basements and habitable attics but not including crawl spaces and uninhabitable attics. In dwellings or dwelling units with split levels and without an intervening door between the adjacent levels, a smoke alarm installed on the upper level shall suffice for the adjacent lower level provided that the lower level is less than one full story below the upper level.

When more than one smoke alarm is required to be installed within an individual dwelling unit, the alarm devices shall be interconnected in such a manner that the activation of one alarm will activate all of the alarms in the individual unit.

CARBON MONOXIDE DETECTOR

A Carbon monoxide device shall be located in the vicinity of the bedrooms, which may include 1 device capable of detecting carbon monoxide near all adjacent bedrooms in areas within the dwelling adjacent to an attached garage, and in areas adjacent to any fuel-burning appliances. Carbon Monoxide Detectors shall not be placed within fifteen feet of fuel-burning heating or cooking appliances such as gas stoves, furnaces, or fireplaces, or in or near very high areas such as bathrooms.

FLASHING AND WEEPHOLES

R703.8.5 Flashing.
Flashing shall be located beneath the first course of masonry above finished ground level above the foundation wall or slab and at other points of support, including structural floors, shell angles and lintels when masonry veneers are designed in accordance with Section R703.7. See Section R703.8 for additional requirements.

R703.8.6 Weepholes.
Weepholes shall be provided in the outside wythe of masonry walls at a maximum spacing of 33 inches (838 mm) on center. Weepholes shall not be less than 3/16 inch (5 mm) in diameter. Weepholes shall be located immediately above the flashing.

R703.4 Flashing.
Approved corrosion-resistant flashing shall be applied shingle-fashion in a manner to prevent entry of water into the wall cavity or penetration of water to the building structural framing components. Self-adhered membranes used as flashing shall comply with ASTM A117. The flashing shall extend to the surface of the exterior wall finish. Approved corrosion-resistant flashings shall be installed at all of the following locations:

- Exterior window and door openings. Flashing at exterior window and door openings shall extend to the surface of the exterior wall finish or to the water-resistant barrier for subsequent drainage.
- At the intersection of chimneys or other masonry construction with frame or stucco walls, with projecting lips on both sides under stucco copings.
- Under and at the ends of masonry, wood or metal copings and sills.
- Continuously above all projecting wood trim.
- Where exterior porches, decks or stairs attach to a wall or floor assembly of wood-frame construction.
- At wall and roof intersections, I.T. At built-in gutters.

FIREPLACES

R1001.0 Hearth extension dimensions.
Hearth extensions shall extend at least 16 inches (406 mm) in front of and at least 8 inches (203 mm) beyond each side of the fireplace opening, 1 or larger, 2 where the fireplace opening is 6 square feet (0.6 m²) the hearth extension shall extend at least 20 inches (508 mm) in front of and at least 12 inches (305 mm) beyond each side of the fireplace opening.

EGRESS WINDOW REQUIREMENTS

- Min. net clear opening of 5.7 sq. ft. (second floor bedrooms)
- Min. net clear opening of 5.0 sq. ft. (first floor bedrooms)
- Min. net clear opening ht. of 24 inches
- Min. net clear opening width of 20 inches
- Max. sill ht. above finish floor of 44 inches

AREAS THAT REQUIRE SAFETY GLAZING

R308.4 Hazardous locations.
The locations specified in Sections R308.4.1 through R308.4.7 shall be considered to be specific hazardous for the purposes of glazing.

R308.4.1 Glazing in doors.
Glazing in fixed and operable panels of swinging, sliding and bifold doors considered to be a hazardous location.

- Exceptions:
- Glazed openings of a size through which a 3-inch diameter (76 mm) sphere is unable to pass.
 - Decorative glazing.

R308.4.1 Glazing adjacent to doors.
Glazing in an individual fixed or operable panel adjacent to a door shall be considered to be a hazardous location where the bottom exposed edge of the glazing is less than 60 inches (1524 mm) above the floor or walking surface and it meets either of the following conditions:

- Where the glazing is within 24 inches (610 mm) of either side of the door in the plane of the door in a closed position.
- Where the glazing is on a wall perpendicular to the plane of the door in a closed position and within 24 inches (610 mm) of the hinge side of an in-swinging door.

- Exceptions:
- Decorative glazing.
 - Where there is an intervening wall or other permanent barrier between the door and the glazing.
 - Where access through the door is to a closet or storage area 3 feet (914 mm) or less in depth. Glazing in this application shall comply with Section R308.4.3.
 - Glazing that is adjacent to the fixed panel of patio doors.

R308.4.3 Glazing in windows.
Glazing in an individual fixed or operable panel that meets all of the following conditions shall be considered to be a hazardous location:

- The exposed area of an individual pane is larger than 9 square feet (0.836 m²)
- The bottom edge of the glazing is less than 18 inches (457 mm) above the floor.
- The top edge of the glazing is more than 36 inches (914 mm) above the floor; and
- One or more walking surfaces are within 36 inches (914 mm), measured horizontally and in a straight line, of the glazing.

- Exceptions:
- Decorative glazing.
 - When a horizontal rail is installed on the accessible side(s) of the glazing 34 to 38 inches (864 to 965 mm) above the walking surface. The rail shall be capable of withstanding a horizontal load of 50 pounds per linear foot (730 N/m) without contacting the glass and a minimum of 1/2 inch (38 mm) in cross-sectional height.
 - Outboard panes in insulating glass units and other multiple glazed panels when the bottom edge of the glazing is 25 feet (7620 mm) or more above grade, a roof, walking surface, or other horizontal surface within 45 degrees (0.78 rad.) of horizontal surface adjacent to the glass exterior.

R308.4.4 Glazing in guards and railings.
Glazing in guards and railings, including structural baluster panels and nonstructural in-fill panels, regardless of area or height above a walking surface shall be considered to be a hazardous location.

R308.4.5 Glazing and wet surfaces.
Glazing in walls, enclosures or fences containing or facing hot tubs, spas, whirlpools, saunas, steam rooms, showers and indoor swimming pools where the bottom exposed edge of the glazing is less than 60 inches (1524 mm) measured vertically above any standing or walking surface shall be considered to be a hazardous location. This shall apply to single glazing and each pane in multiple glazing.

Exceptions:

- Glazing that is more than 60 inches (1524 mm) measured horizontally and in a straight line, from the user's edge of a bathtub, hot tub, spa, whirlpool or swimming pool or from the edge of a shower, sauna or steam room.

R308.4.6 Glazing adjacent to stairs and ramps.
Glazing where the bottom exposed edge of the glazing is less than 36 inches (914 mm) above the plane of the adjacent walking surface of stairways, landings between flights of stairs and ramps shall be considered to be a hazardous location.

- Exceptions:
- Where a rail is installed on the accessible side(s) of the glazing 34 to 38 inches (864 to 965 mm) above the walking surface. The rail shall be capable of withstanding a horizontal load of 50 pounds per linear foot (730 N/m) without contacting the glass and have a cross-sectional height of not less than 1 1/2 inches (38 mm).
 - Glazing 36 inches (914 mm) or more measured horizontally from the walking surface.

R308.4.7 Glazing adjacent to the bottom stair landing.
Glazing adjacent to the landing at the bottom of a stairway where the glazing is less than 36 inches (914 mm) above the landing and within a 60-inch (1524 mm) horizontal arc less than 180 degrees from the bottom tread nosing shall be considered to be a hazardous location.

Exception:
The glazing is protected by a guard complying with Section R312 and the place of the glass is more than 18 inches (457 mm) from the ground.

Subject: Case PZ20-0041

Request for variance for large garage for 22652 Montebellow Ct, Parcel #50-22-27-453-021

We're the closest residence to this new house (yet to be built). Our property line is adjacent to the Montebellow estates. We have no objection to the overside garage, as long as they're not testing race engines inside or something like that.
