BACKGROUND INFORMATION:

Water system improvements to the southwest area of the city were identified in the 2020 Water Master Plan Update to improve water flow and fire protection in the Intermediate pressure district, including the installation of a looped water main connection in this area. This project would involve constructing this looped system consisting of approximately 15,200 feet of 14-inch high-density polyethylene (HDPE) and 12-inch ductile iron water main along portions of 8 Mile, Napier and Beck, including a segment through ITC Sports Park. The majority of the water main will be installed via horizontal directional drilling, a trenchless method that minimizes impact to affected properties and reduces the need for restoration.

This project will improve flows and fire protection in this area of the city and will provide the opportunity for additional improvements including a potential elevated water storage tank, and the possibility of expanding the Island Lake Pressure District. These additional improvements have been studied and will be discussed in the upcoming Water Master Plan Update expected in October.

City engineering consultant, OHM Advisors, assisted City staff with design of the Southwest Water Main Loop project. The project was advertised for public bids on August 12, 2026. Eleven (11) bids were received and opened on September 2, 2026, following the solicitation period. A summary of the five lowest bids is below.
